

Free Debate Cheating Sheet

(社交媒体 16 岁以下禁令 · 自由辩论小抄)

ARG 1: Cyberbullying – “More use, more abuse”

1. 核心主张 (Core Claim)

- 一句话概括:

Social media has become the main stage for a global cyberbullying crisis; **the more teens use it, the more they are exposed to harm.**

- 重点记忆关键词:

- “global cyberbullying crisis”
- “social media as the major venue”
- “more use → more risk → more harm”

2. 关键数据 (Key Stats to Drop)

- 全球流行率 (Zhu et al., 2021, *Frontiers in Public Health*)

- 14–58% of youth have **experienced cyberbullying**,
- 6–46% have **bullied others online**,
- Social media is a **major venue** for this abuse.
- 引用句式:

A 2021 global review in *Frontiers in Public Health* found that between **14% and 58% of**

young people have been cyberbullied, and up to **46% have bullied others**, mostly on social media.

- 风险与严重后果（**Zhu 2021 + Grimland 2025 + Young 2024**）
 - Cyberbullying is **consistently linked** to higher **depression, anxiety, and suicidal behavior**.
 - CDC 2024 YRBS analysis（Young et al., 2024, **MMWR Supplements**）：
 - Frequent social media users $\approx 1.5\times$ the adjusted prevalence of **electronic bullying** compared to less frequent users.
 - 引用句式：

According to a 2024 CDC analysis of U.S. high school students, frequent social media users had about **1.5 times the rate of electronic bullying** compared with lighter users.

3. 场上说法模板（**How to Say It Smoothly**）

- 铺垫 + 数据：

We are not talking about a few isolated cases.

A 2021 global review in **Frontiers in Public Health** shows that between **14% and 58% of young people** have been victims of cyberbullying, and up to **46% have bullied others**, mostly through social media platforms.

- 建立“多用 → 多伤害”的逻辑：

And it's not random. A 2024 CDC analysis published in **MMWR** found that **frequent social media users** had about **1.5 times the rate of electronic bullying** compared to less frequent users.

In simple terms: **the more time teens spend on social media, the more likely they are to be bullied.**

- 连到心理危害：

Reviews in **Frontiers in Public Health** and cross-national studies published by MDPI journals

show that cyberbullying is strongly linked to **depression, anxiety, and even suicide attempts** among adolescents.

- 小结句：

So when we allow under-16s unrestricted access to social media, we are not just giving them “connection”; we are **exposing them to a known bullying machine**.

4. 数据来源可靠性（How to Defend Your Sources）

- 当对方问“你这些数据可靠吗？”：
 - 回答要点：
 - 来自 **peer-reviewed journals**（同行评议期刊）
 - 有 大样本 / 多国比较 / 政府官方数据
 - 公开发表，可查 DOI 与期刊名
- 可直接说的英文：

These numbers are not from blogs or opinion pieces.

They come from **peer-reviewed journals** like **Frontiers in Public Health** and **official CDC reports** in **MMWR**.

That means the data has been checked by independent experts and based on **large, representative samples** of young people.

- 点名文献（方便记忆）：
 - Zhu et al. (2021), **Frontiers in Public Health** – global review on cyberbullying.
 - Young et al. (2024), **MMWR Supplements** – CDC national survey & social media frequency vs. electronic bullying.
 - Grimland et al. (2025), **International Journal of Environmental Research and Public Health** – MDPI public-health journal, cross-national study on cyberbullying and suicide attempt.

ARG 2: Physical Health – “A device that steals sleep and fuels obesity”

1. 核心主张（Core Claim）

- 一句话概括：

Early smartphone and social media use directly harms children’s **physical health**, especially **sleep** and **obesity**, creating long-term health risks.

- 关键词：

- “early means riskier”
- “sleep and obesity risks”
- “body time bomb”

2. 关键数据（Key Stats: Barzilay et al., 2025, **Pediatrics**）

- 样本： **10,000+ U.S. adolescents**
- 在 12 岁时拥有智能手机 vs. 没有手机：
 - **≈ 40% higher odds of obesity**
 - **≈ 62% higher odds of insufficient sleep**
- “Earlier means riskier”：
 - 每提前一年拿到手机， **肥胖和睡眠不足风险增加约 8–9%**
- 对于 13 岁：
 - 在过去一年内刚拿到手机的孩子， **睡眠不足的风险约为无手机同龄人的 1.5 倍**，并且临床级心理病理风险也更高。
- 引用句：

A 2025 study in **Pediatrics** following over **10,000 U.S. adolescents** found that 12-year-olds with smartphones had a **40% higher risk of obesity** and a **62% higher risk of insufficient sleep** compared with peers without phones.

The earlier a child gets a phone, the higher the annual risk – about **8–9% more risk of obesity and sleep problems per year**.

3. 场上说法模板（How to Phrase It）

- 先给画面感 + 数据：

When we give a 12-year-old a smartphone with social media, we're not just giving them a gadget.

We are quietly raising their risk of **obesity and sleep deprivation**.

A 2025 study in **Pediatrics** with over **10,000 adolescents** found that 12-year-olds with smartphones had **40% higher obesity risk** and **62% higher odds of insufficient sleep**.

- 强调“越早越危险”：

The same study shows an “**earlier means riskier**” pattern:

for **each year earlier** a child receives a smartphone, the risks of obesity and sleep problems rise by about **8–9% per year**.

That is a **health deficit piling up** during critical years of growth.

- 连到长期身体后果：

This isn't just about feeling tired.

Chronic sleep loss and obesity in early adolescence are risk factors for **diabetes, cardiovascular disease, and weakened immunity** later in life.

In other words, we are planting a **body time bomb** when we allow under-16s unrestricted smartphone and social media use.

4. 数据来源可靠性（Source Credibility）

- 回答要点：

- **Pediatrics** 是儿科领域的旗舰期刊之一（top pediatrics journal）。

- 文章有大样本（10,000+），采用统计控制（如年龄、性别、社会经济状态等）。
- 有 DOI，可追踪原文。
- 英文说法示例：

This is not a small or biased study.

It was published in **Pediatrics**, one of the leading medical journals for child health, using data from more than **10,000 adolescents**.

The results are peer-reviewed and statistically controlled, which makes them **highly reliable** for policy debates.

- 记忆用文献名：
 - Barzilay et al. (2025), **Pediatrics** – smartphone ownership, age of acquisition & health outcomes.

ARG 3: Brain & Social Development – “Digital brainrot and real-world social atrophy”

1. 核心主张（Core Claim）

- 一句话概括：

Early, heavy social media and smartphone use **reshapes adolescent brain development** and **erodes real-world social skills**, leading to long-term cognitive and social costs.
- 关键词：
 - “developing brain under construction”
 - “hijacked reward system”
 - “less attention, less empathy”

2. 关键数据与结论（Key Evidence）

- 大脑发育：**Maza et al. (2023), JAMA Pediatrics**

- 研究对象：169 early adolescents，追踪约 3 年。
- 习惯性刷社交媒体的青少年（经常检查平台）：
 - 在奖赏、情绪和自我控制相关脑区（如 ventral striatum, amygdala, prefrontal cortex）出现不同的发育轨迹。
 - 随时间推移，对社交奖赏/惩罚的神经敏感性越来越高。
- 结论：早期习惯性检查社交媒体可能改变大脑对社交反馈的处理方式。
- 问题性使用与心理负担：Shannon et al. (2022), JMIR Mental Health
 - 系统综述 + 元分析（18 项研究，约 9300 人）：
 - Problematic social media use 与 抑郁、焦虑、压力 均呈 中度正相关 ($r \approx 0.27-0.35$)。
 - 说明：当使用成为强迫性或成瘾模式时，对心理功能的损伤相当显著。
- 青少年大脑脆弱性：Office of the Surgeon General (2023)
 - 报告强调青春期大脑的 奖励系统过度敏感，而自我控制相关前额叶尚未成熟。
 - 警告：社交媒体平台使用强大的算法和奖励机制（点赞、推送）对青少年大脑可能造成尚未充分评估的长期影响。

3. 场上说法模板（Speaking Templates）

- 先解释“大脑在施工中”：

The adolescent brain is **under construction**.

The reward circuits are very sensitive, while the self-control centers in the prefrontal cortex are not fully developed yet.

- 引入 JAMA Pediatrics 的 fMRI 纵向研究：

A 2023 brain-imaging study in JAMA Pediatrics followed 169 early adolescents for about three years.

It found that teens who **habitually checked social media** showed **increasing sensitivity** in brain regions involved in social rewards and punishment, while non-habitual users did not.

In plain English: the more they repeatedly check social media, the more their brains are **wired to crave online feedback**.

- 连到“**brainrot** / 注意力受损”的概念：

This constant training for quick rewards and notifications **undermines deep focus and self-control**.

When this happens during a critical developmental window, it's not just a bad habit—it is **a change in brain architecture**.

- 加入元分析：

A 2022 meta-analysis in **JMIR Mental Health** shows that problematic social media use has **moderate correlations** with depression, anxiety, and stress.

That means when use becomes compulsive, it **seriously damages mental functioning**, which is exactly what the developing brain relies on for learning.

- 刻画“社交萎缩”：

At the same time, online interaction replaces face-to-face communication.

The U.S. Surgeon General's advisory warns that heavy social media use can **displace real-world relationships** and is linked with higher loneliness and distress.

So we end up with teens who are constantly “connected” online but **less capable of reading emotions, resolving conflicts, and building deep relationships** offline.

- 总结句：

In short, early, heavy smartphone and social media use acts like a **timed debilitator** for the developing mind and social skills—that's why we must draw the line at 16.

4. 数据来源可靠性（Source Credibility）

- 可用的英文话术：

My evidence comes from **top-tier, peer-reviewed medical journals** and official health authorities.

For example, **JAMA Pediatrics** and **JMIR Mental Health** are respected journals, and the U.S. Surgeon General's advisory is a national public-health document.

These are not opinions; they are based on **longitudinal brain scans, meta-analyses, and national surveys**.

- 记忆文献名：
 - Maza et al. (2023), **JAMA Pediatrics** – habitual checking & brain development.
 - Shannon et al. (2022), **JMIR Mental Health** – meta-analysis on problematic social media use & mental health.
 - Office of the Surgeon General (2023) – official advisory on social media and youth mental health.

Introduction Cheating Sheet

（立论开场小抄）

目标：在 30–60 秒内完成 问候 + 题目 + 立场 + 框架 + 三点 **preview** + 价值判断。

1. 开头问候 & 点题（**Greeting & Motion**）

- 模板：

Good [morning/afternoon/evening], judges, opponents, and everyone here.

Today we are debating a motion that will shape an entire generation:

“Social media should be banned for those under 16.”

- 关键词：
 - “shape an entire generation”

- “we are debating a motion that will shape...”
-

2. 明确立场（Stance）

- 模板：

As the Proposition, we say **yes** to this ban —
not because we underestimate young people,
but because we refuse to ignore what we are exposing them to.

- 记忆点：
 - “not because we underestimate them, but because we refuse to ignore the risks.”
-

3. 框架：社交媒体不是中性工具（Framing）

- 模板：

For children, social media is **not a neutral tool**.
It is a 24/7 environment designed to grab their attention,
amplify comparison, and keep them scrolling long after their minds and bodies should be
resting.
When we give a 12- or 13-year-old a smartphone with unrestricted social media,
we are not just giving them “access to the world”;
we are **placing them inside an ecosystem** that can harm them emotionally, physically, and
neurologically.

- 关键词：
 - “not a neutral tool”
 - “24/7 environment”
 - “placing them inside an ecosystem”
-

4. 三大论点 Preview (Roadmap)

- 模板（对应你三个 ARG）：

In this debate, I will focus on **three core reasons** why a ban under 16 is necessary.

First, social media is the main stage for a massive **cyberbullying crisis**, where more use means more harm.

Second, early smartphone and social media use directly damages **physical health**, stealing sleep and fuelling obesity.

Third, these platforms quietly drive **“digital brainrot” and real-world social atrophy**, reshaping the developing brain and weakening real-life social skills.

- 记忆点：
 - “cyberbullying crisis”
 - “steals sleep and fuels obesity”
 - “digital brainrot and social atrophy”

5. 价值判断 + 重申动议 (Value Statement & Close)

- 模板：

These are not minor side effects of “growing up online.”

They are **preventable harms** created by an adult-designed system that children are not yet ready to manage.

A temporary ban on social media for those under 16 is not a punishment;

it is a **protective line** we draw so that children can develop healthy bodies, minds, and relationships

before entering this powerful digital world.

For these reasons, this House **should ban social media for those under 16**. Thank you.

- 关键词：
 - “preventable harms”

- “protective line we draw”
- “before entering this powerful digital world”

通用：当对方质疑“你这些数据从哪儿来的？”时的万能回答

- 万能句 1：总括来源类型

All of my statistics come from **peer-reviewed medical journals** and **official public-health reports**,
such as **Pediatrics**, **JAMA Pediatrics**, **JMIR Mental Health**, **Frontiers in Public Health**,
and the CDC’s **MMWR** series, as well as the **U.S. Surgeon General’s advisory**.

- 万能句 2：强调可查 & 独立审核

These are not opinions or social media posts.
They are based on **large, representative samples** and have been checked by independent experts,
which makes them **reliable enough to guide public policy**, including this debate.

- 万能句 3：如果需要具体文献名

For example, the numbers on obesity and sleep come from **Pediatrics** (Barzilay et al., 2025),
the cyberbullying figures from **Frontiers in Public Health** (Zhu et al., 2021) and CDC’s
MMWR (Young et al., 2024),
and the brain-development evidence from **JAMA Pediatrics** (Maza et al., 2023).

你可以直接在 Typora 里把这些标题当作「折叠小节」使用，
自由辩论时只要记住：

- 每个 ARG 都有：一句主张 + 两个关键数字 + 一句解释数据可靠性，
- Introduction 只要按 问候 → 动议 → 立场 → 框架 → 三点 → 价值判断 的顺序走，就能稳

稳地展开你的论证。
