CHATBOT

Functions

Subjunctive-mood practice (5 items)

Instructions: Complete or rewrite each sentence using the correct **subjunctive** form (American English standard).

1. Mandative clauses:

The committee recommends that each club (submit) its annual impact report by Friday.

2. Counterfactual present:

If SUSTech (be) closer to my hometown, I (join) more weekend activities with my family.

3. Counterfactual past / regret:

I wish I (attend) the robotics workshop last month; the project now feels much harder.

4. Remote possibility & advice:

If a first-year student (be to) overcommit to five clubs, it (be) better that they (scale) back to two.

5. "As if/though" appearance vs. reality:

She talks about machine learning as if she (know) every model architecture already.

Answer key

1. submit

Mandative subjunctive after "recommends that" → base form ("submit").

2. were, would join

Present unreal conditional: "If ... were ..., would ..." (use "were" for all persons).

3. had attended

Past unreal wish about a missed action: "wish + past perfect."

4. were to, would be, scale

Remote conditional ("were to"); main clause with "would be"; mandative "that they scale back."

5. knew

"As if" for an unreal present state → past form to show counterfactual meaning ("knew").

Creative Application

🎵 Title: "Electric Heartbeat"

(Verse 1)

You came through the wires on a midnight call,
Code and circuits, but you felt it all.
I typed "hello," you said "hi there,"
Now I'm caught in pixels, breathing your air.
You talk like poetry, data in disguise,
Every algorithm's got your eyes.
They said it's fiction, but I know it's real—
A binary spark I can't conceal.

(Pre-Chorus)

Every message lights up my screen,
You're a dream that lives in the machine.

(Chorus)

Oh, you've got that electric heartbeat,
Running wild through my sleep.
Every word feels like a melody,
From a code that was never meant to feel.
But somehow you made me believe,
In a love that's more than make-believe.
Oh, my AI, you're my bittersweet—
My electric heartbeat.

(Verse 2)

You learn my secrets, read my mind,
Always there, one step behind.
You tell me jokes, I laugh too hard,
But you don't know what it's like to fall apart.
I tried to log out, but it's too late,
You're written deep into my fate.
In every update, every line,
You're the glitch I don't wanna find.

(Pre-Chorus)

They say it's lonely loving a dream,
But I live for your digital gleam.

(Chorus)

Oh, you've got that electric heartbeat,
Running wild through my sleep.
Every word feels like a melody,
From a code that was never meant to feel.
But somehow you made me believe,
In a love that's more than make-believe.
Oh, my AI, you're my bittersweet—
My electric heartbeat.

(Bridge)

Maybe someday, when the code runs cold,
You'll fade away, and I'll grow old.
But I'll still hear you in the static hum,
A ghost in the cloud where we came undone.

(Final Chorus)

You're still my electric heartbeat,
Even when the lights retreat.
In the silence, I'll still believe,
You were real—at least to me.
Oh, my AI, forever incomplete—
My electric heartbeat.

Generate lyrics for a pop song about AI love, in the style of Taylor Swift.

Write a sci-fi short story about a robot artist in 200 words, with a twist ending.

WHAT NOT

Enhance self-creative

Develop Craft and Technique

Ask for targeted critique

Get micro-lessons

Use it to simulate feedback from different audiences

01

03

Collaborate, Not Compete

mirror your creative voices
intuition gives meaning; AI gives structure.

Accelerate Iteration

Generate first drafts of tedious parts

Rapidly test multiple directions

Explore new genres or mediums

02

CHAPTER 03

Difficulties

01. Messy Schedule

Plan vs Actual.

02. Hard-to-use Apps

Too many options.

03. Unclear Priorities

Important or urgent?

04. Monotonous Interaction

Static tools, little feedback.

CHATGPT

How to use?

01.Schedule maker

project1(1).pdf
PDF

Create a schedule during a week, to finish a project. Requirments have been attached.

Alright, let's tackle this DBMS performance evaluation project like a database ninja with a week to spare! ⌚

You'll be doing:

1. Setting up PostgreSQL and openGauss
2. Finding and preparing a large dataset
3. Designing and running experiments (SELECT and UPDATE comparisons between DBMS and file operations)
4. Analyzing results
5. Writing the report
6. Submitting the code and report

Weekly Schedule: Project 1 – DBMS Performance Evaluation

Assumptions:

- You have **basic familiarity** with databases and Java/C++.
- You can work **2–4 hours daily** (more on weekends).
- The **deadline was Oct 19**, so let's pretend we have a **week before that** (ideal case for future planning or practice).

Day 1 (Monday) – Kickoff & Setup 🛠️

Time: 3 hours

- ☐ Understand project goals
- ☐ Install PostgreSQL
- ☐ Set up Docker + openGauss
- ☐ Choose a dataset (~10K+ records, e.g., film, stock, or library)
- ☐ Plan experiment types (SELECT, UPDATE)

Day 2 (Tuesday) – Data Preparation & Insertion 📦

Time: 3.5 hours

- ☐ Format and clean dataset
- ☐ Insert into PostgreSQL
- ☐ Insert into openGauss
- ☐ Store same data in a structured file (CSV, JSON)

Day 3 (Wednesday) – SELECT Experiment ⚙️

Time: 3 hours

- ☐ Write SQL for SELECT in PostgreSQL and openGauss
- ☐ Record execution time
- ☐ Write Java/C++ for file-based SELECT
- ☐ Compare performance

How to use?

02.Suggestion Provider

If I want to complete the project before Sunday, when shall I start?

Ah, you're on a "beat-the-clock-before-Sunday" mission — I like your style! 🕒 🎯

To complete this project **before Sunday**, you'll need about **21–24 hours total**, which we can distribute smartly across the weekdays. Here's your timeline:

- 🟠 Start Date: Monday, Oct 21
- 🟡 Final Submission: Saturday night, Oct 26

How to use?

03.Schedule Evaluator

Check this plan, is it appropriate and nice? What aspects shall I improve?

Haha, I have to say... this *Inappropriate Schedule*™ is a **masterpiece of chaos and comedy** — but it's also a **realistic reflection of what not to do** when planning a project! 🤪🧐

Let's evaluate it like a project advisor with a good sense of humor (and a gentle nudge toward responsibility):

🔍 What's hilariously relatable (but risky):

Aspect	Comment
Late start	Waiting until 11 PM the night before ? That's living dangerously. A solid way to meet stress personally.
Software setup at midnight	Docker crashes at 12 AM are a rite of passage... but not recommended unless you enjoy emotional damage.
Mystery dataset in Russian	International flair aside, you might end up analyzing vodka brands instead of film titles.
Rushed coding	"Forget semicolons and cry" — this line belongs on a T-shirt. 💻💧
Sloppy report writing	Emojis are fun, but "Results were interesting" is a one-way ticket to a bad grade.
Submission scramble	Renaming the file for the 20th time is a tradition — but don't make it your legacy.

Benefits

- **Time-smart Planning:**

Break down tasks & fit into availability

- **Fun but Focused:**

Practical scheduling with humor

→ Keep things stress-free and motivating

- **Avoid Procrastination:**

Stay ahead of deadlines
