

Reading Journal X - SEIII

Congratulations! This is your final reading journal!!!

For the remaining Reading Journals there will be three different options, or "tracks". Remember that you **only have to choose one track**. If you did not finish your second book, that is okay! Please reflect about the material either way and provide answers using your own words.

Track One: Extensive Reading - Fiction.

1. Title: _____
2. Author: _____

3. **Summary:** What has happened in the story since your last journal? What events occurred in the plot and what effects did they have on the characters? (100 words)

4. **Reflection:** What are your thoughts and feelings about the story and its characters? Be honest and creative. (150-200 words)

5. Write down **three vocabulary words** as well as their definitions and example sentences.

OR

Track Two: Extensive Reading – Non-Fiction. Please choose work of non-fiction. The

book can be about any subject (history, science, geography, philosophy, etc.) and should be at least 20,000 words. Obviously, it must be in English.

1. Title: _____
2. Author: _____

3. **Summary:** What is something interesting you learned from this text recently? Describe. (100 words)

4. **Reflection:** What are your thoughts and feelings about the book? How has this knowledge helped you? Can it be applied to your life? What are your thoughts/feelings about it? Be thoughtful and creative. (150-200 words)

5. Write down **three vocabulary words** as well as their definitions and example sentences.

OR

Track Three - Textbook. Each week I will assign a new reading from your Reading and Writing textbook. For this week, please read: "The Coming Energy Crisis" Unit 7 Text A pgs. 191-194.

1. What is the author's main point? Please summarize in your own words. (100 words)

2. In your opinion, what are our best options for alternative energy sources in the future? Explain. (100-150 words)

3. Write down **three vocabulary words** as well as their definitions and example sentences.

This journal is due on Sunday, December 21st by 21:00.

Please keep in mind that ALL READING AND LISTENING JOURNALS ARE DUE ON MONDAY JUNE 9th by 11:59 pm. Any work turned in after this time will receive a "0" grade.

Track II

- **Title:** Being Logical: A Guide to Good Thinking
- **Author:** D. Q. McInerny
- **Summary:**

In this book, I learned that an argument is not just "an opinion", but a set of reasons that support a conclusion. One idea that impressed me a lot is the difference between a valid argument and a true conclusion. An argument can be valid if the conclusion follows from the premises, even if the premises are false. The book also explains common mistakes, like attacking the person instead of the point, or using one example to claim something is always true. This helped me notice when I am being convinced by style, not logic. Now I'll check the reasons before agreeing.

- **Reflection:**

I chose this book because it explains logic in a clear, practical way. It did not feel like a school textbook, instead, it felt like someone teaching you how to think step by step. While reading, I

realized I often jump to a conclusion first and then look for support. However, the book reminded me to slow down and ask: What are the premises? Are they true? Do they really lead to the conclusion? This knowledge helps me in daily life. When I read news online or watch short videos, I try to notice emotional language and check whether there is real evidence. In class discussions, I can disagree more politely by focusing on the idea, not the person. I also use these ideas in writing: I try to define key words and avoid making claims that are too broad. Overall, the book makes me feel more confident, because good thinking is a skill I can practice.

- **Vocabulary:**

Premise

n. A reason or statement that supports a conclusion.

e.g.: My premise is that practice improves skills, so I should study daily.

Fallacy

n. A mistake in reasoning that makes an argument weak.

e.g.: Saying “he is rude, so his idea is wrong” is a fallacy.

Deduce

v. To reach a conclusion by using facts and logic.

e.g.: From the evidence, we can deduce that the plan will not work.
